

**IN THE SPECIFICATION**

In the specification, at page 11, replace the paragraph that begins at line 20 with the following paragraph with additions shown by underlining:

The cable 5 can also include a shielding means for shielding interference radiation, which can be connected in particular to the shielding means (101 in Figure 8) of the nuclear magnetic resonance tomograph 100 for electromagnetic interference radiation (for example by means of a connecting line 103) in order to set both shielding means at the same potential. It is also possible for each line of the cable to be provided with its own shielding means 13, shown in FIGS 4 and 4a.
